Abstracts

The global Transmission Line Arrester market size is expected to reach \$ 191 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

A lightning arrester is a device, used on power systems, which contains billions of electronic switches that divert lightning around sensitive equipment and protects them from damage of lightning and switching surges. There are four different classes of arresters, including station class, intermediate class, distribution class (transmission line arrester) and secondary class.

A line arrester is any arrester that is applied on the lines of a power system to reduce the risk of insulator flashover during surge events. A line arrester is not generally used to protect equipment. Substation type arresters as well as distribution type arrester can be used for line protection and in this case are then considered line arresters.

Transmission line arrester is a line arrester applied on a transmission line.

China is the largest Transmission Line Arrester market with about 17% market share. Europe is follower, accounting for about 16% market share.
