According to our (Global Info Research) latest study, the global Transmission and Distribution Field Inspection Services market size was valued at US\$ 661 million in 2025 and is forecast to a readjusted size of US\$ 982 million by 2032 with a CAGR of 5.8% during review period.

To address the problems of traditional power transmission and distribution equipment inspection relying on power outages, low efficiency of manual inspections, and difficulty in early detection of hidden faults, on-site inspection services for power transmission and distribution have emerged. Since the widespread deployment of smart grid technology and online condition monitoring methods, the field of power equipment operation and maintenance has developed significantly. Currently, on-site inspection services for power transmission and distribution have evolved into a comprehensive system covering various types of services, including insulator zero-value detection, grounding resistance testing, infrared thermal imaging diagnostics, partial discharge online monitoring, circuit breaker mechanical characteristic testing, and power quality analysis. These services are widely used in transmission lines, substations, distribution networks, and distributed energy access, significantly improving power supply reliability, preventing sudden equipment failures, and optimizing the entire lifecycle of operation and maintenance costs.
