According to our (Global Info Research) latest study, the global Transmission Oil Pump market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Transmission oil pumps provide fluid pressure for the transmission or torque converter, wherein the valve body regulates, controls, and directs the flow of pressurized transmission fluid. Variable displacement pump like axial piston pump save energy by decreasing output, without affecting the speed, whereas, fixed displacement pumps, such as gear pumps, bent axis pumps, and screw pumps, sometimes provide unneeded pressure.

The global transmission oil pump market is driven by growth in demand for automatic cars, rise in preference for automation by inexperienced drivers, and increase in traffic congestion in developing and developed countries. However, the fast adoption of automated manual transmission (AMT) in commercial vehicles and low mechanical efficiency of automatic transmission are expected to hinder the growth.

The Global Info Research report includes an overview of the development of the Transmission Oil Pump industry chain, the market status of Passenger Vehicle (Fixed Displacement Pump, Variable Displacement Pump), Commercial Vehicle (Fixed Displacement Pump, Variable Displacement Pump), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Transmission Oil Pump.
