According to our (Global Info Research) latest study, the global Transmitting Magnetic Compass market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Transmitting magnetic compass is a type of compass used on ships and other marine vessels to determine the direction of the vessel relative to the Earth's magnetic field. It consists of a compass card housing, which contains a suspended magnetic needle, and a system of gears and linkages that transmit the rotation of the needle to a repeater on the bridge. The repeating compass display provides accurate real-time information about the vessel's heading to the navigation team, enabling them to navigate and steer the vessel accurately and safely.
