Abstracts

Transparent Acrylonitrile–butadiene–styrene, the most common product is MABS, is a clear engineering and commodity thermoplastic that has rubber particles dispersed throughout a methyl methacrylate-acrylonitrile styrene (MMA-SAN) polymer matrix. The incorporating of rubber particles into a MMA-SAN matrix and optimization of the composition results in a highly transparent polymer whereas conventional ABS is opaque. This amorphous, clear, transparent engineering and commodity thermoplastic has excellent transparency, high-impact strength, good stiffness and good resistance to many chemicals. It is also easy to process with standard equipment including extrusion and injection molding and can be easily colored.
