Abstracts

According to our (Global Info Research) latest study, the global Transparent Sheet Production Line market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The transparent sheet production line is mainly used to produce various transparent sheets, such as PC, PMMA, GPPS, PET, MS and other materials. The production line usually consists of multiple parts, including raw material processing, extrusion molding, cooling and shaping, cutting and trimming, inspection and packaging, etc. It has a high degree of automation, high production efficiency, and stable product quality. It is widely used in construction, advertising, transportation, medicine, industry, lighting and other fields.

Among them, the raw material processing system: responsible for drying, mixing and other pre-treatment of raw materials (such as resin particles) to ensure the purity and uniformity of raw materials. Extrusion molding system: the processed raw materials are heated and melted by the extruder and then extruded to form continuous sheet blanks. The extruder is the core equipment of the production line, and its performance directly affects the quality and output of the sheet. Cooling and shaping system: the extruded sheet blank is quickly cooled through the cooling device to shape it and maintain a certain dimensional accuracy and surface quality. Cutting and trimming system: Cut and trim the cooled and shaped sheets to meet different size and shape requirements.

Inspection and packaging system: Perform quality inspection on the finished sheets, including appearance, size, performance and other aspects, and package and store them after passing the inspection.
