Abstracts

The global Transportation Mobile Video Surveillance market size is expected to reach \$ 27100 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

Transportation Mobile Video Surveillance typically refers to in-vehicle video surveillance systems deployed on buses, school buses, subway trains, taxis, police cars, logistics vehicles, and other transportation vehicles. Its core components include in-vehicle cameras, in-vehicle recording hosts, wireless transmission modules, storage units, positioning modules, and a backend management platform. It continuously collects video, audio, and location information from inside and outside the vehicle during operation and transmits this data back to the dispatch or security center via 4G, 5G, or Wi-Fi. Transportation Mobile Video Surveillance is not merely a single camera product, but a systematic video solution centered on in-vehicle scenarios, combining real-time monitoring, event evidence collection, dispatch coordination, and operational analysis capabilities.

The need for in-vehicle security, driver behavior monitoring, and accident tracing is driving public transportation, school buses, and rail transit to increasingly rely on mobile video surveillance systems. Dahua Technology, in its public transportation and school bus solutions, explicitly lists driver behavior analysis, passenger safety, blind spot assistance, and child abandonment detection as core capabilities, demonstrating that mobile video surveillance has evolved from 'passive recording' to a 'proactive early warning' tool.

Operational efficiency and service quality are becoming new procurement priorities. Axis, in its public transportation solutions, emphasizes that cloud-based mobile

monitoring not only provides safety visualization but also continuous visibility for the entire fleet. Advances in edge AI, cloud platforms, and wireless networks are driving product value towards data analysis, with in-vehicle systems beginning to undertake tasks such as passenger flow statistics, event classification, driver status recognition, and vehicle-to-everything (V2X) data collection.
