## Abstracts

Transthyretin Amyloidosis (ATTR) is an autosomal dominant hereditary disease that occurs due to deposition of variant TTR (transthyretin) protein in humans. It is mainly characterized into two main types i.e. Hereditary ATTR (hATTR) and Wild-Type (wt) ATTR. While Hereditary ATTR is caused by point mutations within TTR allele, wild-type ATTR is caused by the misfolding of Wild-Type TTR. Major prevalence of Hereditary ATTR is observed in the 7MM, and this type has been further sub-classified into Familial Amyloidosis Polyneuropathy (FAP) and Familial Amyloidosis Cardiomyopathy (FAC).
