Trapezoidal screw electric actuator is a common electric drive device, widely used in mechanical and automation systems that require linear motion. It combines the transmission characteristics of the lead screw with the electric drive system to provide smooth linear displacement. The lead screw is driven by the motor to rotate, driving the nut to move along the axis of the screw, thereby achieving linear motion. The motor is usually connected to the screw through a speed reducer to provide the appropriate torque and speed. The special design of the lead screw can reduce friction, provide smooth movement and high load carrying capacity.
