## Abstracts

According to our (Global Info Research) latest study, the global Trash Compactors market size was valued at USD 299.4 million in 2023 and is forecast to a readjusted size of USD 365 million by 2030 with a CAGR of 2.9% during review period.

A compactor is a machine or mechanism used to reduce the size of material such as waste material or bio mass through compaction. A trash compactor is often used by a home or business to reduce the volume of trash. Trash compactors are quite similar to industrial balers, but they are usually used to process non-recyclable materials. The garbage is loaded into the input chamber and subjected to tremendous pressure by a hydraulic or pneumatic press. Once it's processed, the volume of the waste is greatly reduced, which makes it easier to handle and cheaper to transport, since fewer hauling rounds are required.

Global Trash Compactors key players include Wastequip, Precision Machinery Systems, PRESTO, Marathon Equipment, etc. Global top four manufacturers hold a share over 15%.

USA is the largest market, with a share about 30%, followed by China, and Germany, both have a share about 15 percent.

In terms of product, 5-10 cubic yards is the largest segment, with a share over 50%. And in terms of application, the largest application is Distribution Center, followed by Airport, Hospital, Retail Store, etc.
