Abstracts

Treadmill is an exercise machine, typically with a continuous belt, that allows one to walk or run in place.

An ergometer measures your work output. A high-tech ergometer might measure your blood pressure and oxygen uptake, but a basic ergometer is a piece of fitness equipment that provides basic workout data, such as your exercise time, distance traveled, calories burned and speed. A Treadmill Ergometer is a step mill with a console that displays information about your workout. Some machines also include a heart rate monitor and a fitness assessment program.
