Abstracts

According to our (Global Info Research) latest study, the global Treadmill Machines market size was valued at USD 5834.2 million in 2023 and is forecast to a readjusted size of USD 6532 million by 2030 with a CAGR of 1.6% during review period.

A treadmill is a device generally for walking, running or climbing while staying in the same place. Rather than the user powering the mill, the machine provides a moving platform with a wide conveyor belt driven by an electric motor or a flywheel. The belt moves to the rear, requiring the user to walk or run at a speed matching that of the belt. The rate at which the belt moves is the rate of walking or running. Thus, the speed of running may be controlled and measured. The more expensive, heavy-duty versions are motor-driven (usually by an electric motor). The simpler, lighter, and less expensive versions passively resist the motion, moving only when walkers push the belt with their feet. The latter are known as manual treadmills.
