According to our (Global Info Research) latest study, the global Treasury Management Software market size was valued at USD 259.3 million in 2023 and is forecast to a readjusted size of USD 384.5 million by 2030 with a CAGR of 5.8% during review period.

Treasury management software (TMS) is a software application that automates the process of managing a company's financial operations. It helps companies to manage their financial activities, such as cash flow, assets, and investments, automatically. A TMS is commonly used to maintain financial security and minimize reputational risk. A TMS can perform various functions, such as cash flow management and forecasting, payment management and account reconciliation, debt and investment management, financing and risk management, and reporting for documentation. A TMS can also connect to external sources of data, such as banks, trading platforms, and financial systems, to facilitate communication and integration. A TMS can be either installed locally on a company's server or hosted on the cloud as a software as a service (SaaS) solution.

The industry trend of treasury management software is driven by the increasing demand for automation, integration, security, and analytics in the treasury function. Some of the key trends are:

Cloud adoption: More companies are opting for cloud-based TMS solutions over traditional on-premise ones due to the benefits of scalability, flexibility, cost-efficiency, accessibility, and innovation. Cloud-based TMS solutions also enable faster implementation and easier integration with other systems.

Artificial intelligence (AI) and machine learning (ML): AI and ML technologies are enhancing the capabilities of TMS solutions by enabling more accurate cash flow forecasting, automated payment processing, intelligent risk management, anomaly detection, fraud prevention, and data-driven insights.

Application programming interfaces (APIs): APIs are enabling seamless connectivity between TMS solutions and various external data sources and platforms, such as banks, market data providers, payment service providers, ERP systems, accounting systems, etc. APIs also facilitate real-time data exchange and automation of workflows across different systems.

Data security and compliance: Data security and compliance are becoming more critical for treasury operations due to the increasing volume and complexity of financial transactions and data. TMS solutions are adopting advanced encryption techniques, multi-factor authentication methods, role-based access controls, audit trails, etc., to ensure data protection and privacy. TMS solutions are also helping companies comply with various regulatory requirements and standards related to treasury activities.
