## Abstracts

The global Tree Trimming Robot market size is expected to reach \$ 1044 million by 2032, rising at a market growth of 18.4% CAGR during the forecast period (2026-2032).

Tree pruning robots are automated intelligent equipment integrating machine vision, artificial intelligence, multi-degree-of-freedom robotic arms, automatic cutting actuators, and mobile/climbing platforms. They can autonomously identify, locate, cut, and prune branches from trees, fruit trees, garden vegetation, and power line obstructions, either unmanned or remotely controlled.

The upstream core hardware of tree pruning robots includes vision cameras, LiDAR, force sensors, motors, reducers, cutting tool motors, cutting tools, industrial control computers, and control chips. Core technologies include machine vision, artificial intelligence, automatic control technology, and navigation and positioning. Downstream applications are mainly in orchard planting, landscaping, forestry management, and municipal engineering.

In 2025, global sales of tree pruning robots reached 61,500 units, with a production capacity of approximately 92,000 units. The average selling price was \$5,000 per unit, and the average gross profit margin was 30%-40%.
