Triple silver low-emissivity glass is a high-performance energy-saving glass that achieves excellent heat insulation and thermal insulation performance by coating three layers of silver-based low-emissivity coating on the glass surface. Triple silver low-emissivity glass can effectively block infrared rays in sunlight and reduce the absorption of indoor heat in summer, thereby reducing air conditioning energy consumption, reducing glare and light pollution, and providing a more comfortable visual experience. This glass is widely used in building curtain walls, windows and other occasions that require efficient energy management.
