Triamcinolone acetonide and econazole nitrate cream is a topical medication that combines two active ingredients:

Triamcinolone acetonide: This is a corticosteroid medication used to reduce inflammation, itching, redness, and swelling associated with various skin conditions such as eczema, dermatitis, psoriasis, and allergic reactions.

Econazole nitrate: This is an antifungal medication used to treat fungal skin infections such as athlete's foot (tinea pedis), jock itch (tinea cruris), ringworm (tinea corporis), and yeast infections.

The combination of these two ingredients in a cream formulation allows for the treatment of both inflammatory and fungal skin conditions concurrently. It is typically applied topically to the affected area as directed by a healthcare professional.
