2. Special seat frame design: Triathlon bike seats are usually designed to be more forward to reduce the cumulative consumption of leg muscles and reduce the feeling of squeezed legs and feet during cycling.
3. Deep V-shaped front fork and frame: Triathlon bikes usually use deep V-shaped front forks and frames to reduce wind resistance.
4. Aero bar: Triathlon bikes usually use an adjustable Aero bar to increase riding comfort.
5. Overall design: The design of the entire vehicle is usually easy for the rider to adjust and adapt to his body's competition needs.

Overall, the Triathlon bike is designed to increase speed and reduce fatigue while riding, while also providing the rider with as much comfort as possible, with flexible adjustments and adaptability.

Triathlon bike is a bicycle specially designed for triathlon competition. Compared with traditional road bikes (Road bike) or single-car racing bikes (Time Trial bike), it has some special features in design and structure, mainly to increase speed, reduce resistance and increase comfort.
