The global Tributyrin Powder market size is expected to reach \$ 189.7 million by 2030, rising at a market growth of 7.1% CAGR during the forecast period (2024-2030).

Tributyrin is lipidated by butyric acid and glycerol. It does not decompose in gastric juice. It is slowly released into butyric acid and glycerin under the action of pancreatic lipase, repairs small intestinal villi, inhibits harmful bacteria in the intestine, and promotes the absorption and utilization of nutrients. It has the function of protecting animal intestinal health, improving the intestinal micro-ecological environment and improving animal growth performance.
