According to our (Global Info Research) latest study, the global Trichloromethane market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Trichloromethane, or Chloroform, is an organic compound with formula CHCl_3 . It is a colorless, sweet-smelling, dense liquid that is produced on a large scale as a precursor to PTFE. It is also a precursor to various refrigerants. It is one of the four chloromethanes and a trihalomethane.

Chloromethane, also known as methyl chloride is produced from sulfuric acid, sodium chloride and methanol mixture. Chloromethane is an extremely flammable and colorless gas, hence widely used as a chlorinating and methylating agent in organic chemistry. Chloromethane application as intermediate in drug manufacturing and as a local anesthetic in medication has resulted in its growing demand in pharmaceutical industry.
