## Abstracts

The tricuspid valve includes the annulus, leaflets, chordae tendineae, and papillary muscles. The tricuspid valve annulus is the attachment edge of the valve leaflets. The tricuspid valve has three leaflets, namely the anterior valve, the posterior valve and the septal valve. Compared with the mitral valve, the tricuspid valve has a larger opening, thinner leaflets, and more transparency. The anterior papillary muscle sends out chordae tendineae to connect with the anterior and posterior flaps, and the posterior papillary muscle sends out chordae tendineae to connect with the posterior and septal flaps. The septal papillary muscle has chordae tendineae attached to the anterior and septal flaps. The normal function of the tricuspid valve depends on the integrity and coordination of these structural components.
