Abstracts

The global Triethleneglycol Dimethacrylate (TRGDMA) market size is expected to reach \$ 271 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Triethleneglycol dimethacrylate (TRGDMA) is a bifunctional methacrylate monomer commonly abbreviated as TEGDMA, and some companies also write TRGDMA, with a CAS number of 109-16-0. This product has the characteristics of low viscosity, free radical polymerization, and crosslinkable curing. It is usually used as a crosslinking agent, reactive diluent, adhesion promoter, and reaction resin component. In 2025, global Triethleneglycol Dimethacrylate (TRGDMA) production reached approximately 8,455 Tons, with an average global market price of around US\$ 22.41 per kg.

Triethleneglycol dimethacrylate (TRGDMA) belongs to functional methacrylate monomers, and the market demand is mainly supported by UV curing materials, dental composite resins, adhesives and sealants, coatings and inks, PVC plastisol, electronic chemicals, and reactive resin systems. Its core value lies not in its bulk basic chemical properties, but in its low viscosity, bifunctional crosslinking, curing efficiency, and formulation adaptability, which can improve hardness, adhesion, chemical resistance, wear resistance, mechanical strength, and film-forming performance in resin systems. The future market growth is mainly driven by three directions: firstly, the increasing demand for environmentally friendly UV curing and low VOC coating inks, which promotes the use of reactive diluents and low volatile monomers; Secondly, the demand for high-purity monomers in dental restorative materials, oral adhesives, and medical photopolymerization resins remains stable; The third is the upgrading of electronic materials, solder mask inks, photopolymerization adhesives, and precision packaging materials, which require higher requirements for low impurities, batch stability, and

formula compatibility. Therefore, the TRGDMA market will continue to exhibit the development characteristics of small varieties, multiple specifications, and high added value. Enterprises with high purification, low color, precise control of polymerization inhibitors, and application formula services are more likely to obtain high-end customer orders.
