Triflic acid and triflic anhydride are organic compounds and are colorless liquids at room temperature. The triflic acid is a super strong acid that can react with many organic compounds. The triflic anhydride is an anhydride of triflate. It is a strong acid anhydride that can convert alcohols, phenols and other compounds into the corresponding triflates.

Triflic acid and triflic anhydride are widely used in the field of organic synthesis. The triflic acid is acidic and highly corrosive, and the triflic anhydride is highly reactive and toxic, requiring strict safety measures when using them. At the same time, they also need to be properly stored to avoid contact with water, oxygen and other substances to avoid dangerous reactions.
