Abstracts

The global Trioctyl Amine market size is expected to reach \$ 65.21 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Trioctyl Amine (TOA or TA8) is a colorless to pale yellow transparent oily liquid, alkaline, with a slight ammonia odor. It is an aliphatic tertiary amine, sparingly soluble in water but readily soluble in organic solvents, primarily used as an industrial extractant (e.g., in metal smelting to separate lanthanides, nickel, and cobalt).

The upstream of trioctyl tertiary amine synthesis mainly relies on petrochemical-derived n-octanol or n-octane, through catalytic amination reactions (reaction with ammonia or methylamine). Its cost is significantly affected by crude oil prices and the supply of the C8 alcohol chain.

Global sales in 2025 were approximately 20,000 tons, with a market price of \$2,400 per ton. The industry gross profit margin was around 35%.

This report studies the global Trioctyl Amine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Trioctyl Amine and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
