According to our (Global Info Research) latest study, the global Trioctyl Amine market size was valued at US\$ 49.39 million in 2025 and is forecast to a readjusted size of US\$ 65.21 million by 2032 with a CAGR of 4.0% during review period.

Trioctyl Amine (TOA or TA8) is a colorless to pale yellow transparent oily liquid, alkaline, with a slight ammonia odor. It is an aliphatic tertiary amine, sparingly soluble in water but readily soluble in organic solvents, primarily used as an industrial extractant (e.g., in metal smelting to separate lanthanides, nickel, and cobalt).

The upstream of trioctyl tertiary amine synthesis mainly relies on petrochemical-derived n-octanol or n-octane, through catalytic amination reactions (reaction with ammonia or methylamine). Its cost is significantly affected by crude oil prices and the supply of the C8 alcohol chain.

Global sales in 2025 were approximately 20,000 tons, with a market price of \$2,400 per ton. The industry gross profit margin was around 35%.

This report is a detailed and comprehensive analysis for global Trioctyl Amine market.
