According to our (Global Info Research) latest study, the global Triple Hormone Receptor Agonists market size was valued at US\$ 158 million in 2025 and is forecast to a readjusted size of US\$ 513 million by 2032 with a CAGR of 18.0% during review period.

Triple Hormone Receptor Agonists are investigational multi-agonist peptide therapeutics that simultaneously activate GLP-1, GIP, and glucagon receptors, and are being developed for obesity, metabolic syndrome, and type 2 diabetes. As none of these agents have been commercially launched, supply in 2025 was limited to clinical-grade and research-grade material. Based on industry benchmarks for multi-agonist peptide programs, global effective manufacturing capacity for clinical-grade API in 2025 is estimated at 18 kilograms, with actual utilization of approximately 6.3 kilograms, corresponding to a market size of USD 154 million, an average selling price of USD 24,400 per gram, and an estimated gross-margin level of 38%. Upstream inputs include protected amino acids, solid-phase peptide synthesis resins, coupling reagents, organic solvents, chromatography media, and GMP-compliant peptide manufacturing systems, while downstream demand originates from metabolic-disease R&D teams in pharmaceutical companies, clinical trial institutions, CRO/CDMO partners, and academic research laboratories. With rapid expansion of GLP-1-based therapies and rising global demand for obesity and metabolic-disease treatment, Triple Hormone Receptor Agonists are viewed as a key pipeline direction with potential clinical and commercial differentiation, and their eventual approval may drive substantial growth in upstream peptide-manufacturing capacity and create new market opportunities.
