Triple Insulated wire is also called triple insulated wire. It is a high-performance insulated wire newly developed in the world in recent years. This wire has three insulating layers, with the core wire in the middle. The first layer is a golden polyamide film, which is called 'gold film' abroad. It is several microns thick, but can withstand 1kV pulse high voltage; the second layer is a high-insulation spray coating; the third layer (outermost layer) is a transparent glass fiber layer. The total thickness of the insulating layer is only 20 to 100 um. Triple Insulated wire for electronic equipment is mainly aimed at the product market in the field of electronic equipment, which has higher insulation requirements on performance.
