The global Triple Lumen Hemodialysis Catheter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Triple lumen hemodialysis catheter is a type of medical device that is used to provide temporary access to the bloodstream for patients who require hemodialysis treatment. Hemodialysis is a medical procedure that removes waste and excess fluid from the blood when the kidneys are not functioning properly. The triple lumen catheter has three separate channels or lumens, which are used for different purposes during the hemodialysis treatment. One lumen is used to withdraw the blood from the patient's body and transport it to the dialysis machine, where it is cleaned and filtered. Another lumen is used to return the clean blood back to the patient's body. The third lumen is used to administer medications or fluids as needed.
