The global Triple Pedal Trash Cabinet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Triple foot trash cabinet is a type of equipment used for treating dirt in hospitals, laboratories, pharmaceutical factories, and other places. It usually consists of three different colored garbage bins, each used to collect different types of waste, such as infectious waste, chemical waste, and ordinary waste. At the same time, the triple foot trash cabinet is also equipped with a foot pedal device, which facilitates the operator to handle the trash without directly touching the trash can, thereby reducing the risk of cross infection. The use of a triple pedal trash cabinet can effectively control the spread and pollution of dirt, protect the environment and human health. During use, it is necessary to pay attention to the correct classification and treatment of different types of dirt, comply with relevant hygiene standards and regulations, and ensure that the dirt is safely and efficiently treated and disposed of.
