According to our (Global Info Research) latest study, the global Triple Quadrupole LC/MS market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Triple quadrupole LC/MS combines liquid chromatography technology and mass spectrometry technology. It is a high-performance analytical instrument that can conduct qualitative and quantitative analysis of complex samples more accurately and quickly. It is widely used in biology, Pharmacy, chemistry, traditional Chinese medicine, traditional Chinese medicine, clinical medicine, food science, environmental science, forensic identification and other fields. The working principle of the triple quadrupole liquid mass spectrometer is to use liquid chromatography technology to efficiently separate complex sample components. The separated components are ionized by the ion source to generate ions, and the ions are selectively separated by the triple quadrupole. , use mass spectrometry technology to analyze selected specific ions to obtain molecular weight and molecular structure information, thereby achieving qualitative and quantitative analysis of samples.
