Abstracts

According to our (Global Info Research) latest study, the global Triple-Screen Automotive Cockpit market size was valued at US\$ 695 million in 2025 and is forecast to a readjusted size of US\$ 1083 million by 2032 with a CAGR of 6.6% during review period.

A triple-screen car cockpit design integrates the instrument panel, central control screen, and passenger entertainment screen into a single unit. Utilizing a seamless black finish or high-tech materials, it enables passenger entertainment, navigation sharing, and multi-screen interaction. The instrument panel, central control screen, and passenger screen can share data; for example, the passenger can directly send navigation information to the central control screen. The screen caters to the passenger's entertainment needs, such as watching videos and listening to music, while system settings prevent it from interfering with the driver's safe driving. Common features include shatterproof glass, a seamless black finish, and even 3D vehicle control and a lifting design, creating an immersive spatial experience.

The upstream sector primarily includes LCD/OLED/Mini-LED display panel manufacturers, touch module suppliers, backlight providers, driver IC suppliers, GPU/SoC cockpit chip suppliers, glass cover suppliers, FPC flexible circuit board suppliers, and suppliers of metal and plastic structural components, providing the core display and electronic hardware foundation for triple-screen systems. The midstream sector comprises smart cockpit and in-vehicle display system integrators, responsible for the integrated design and integration of the instrument panel screen, central control screen, and passenger entertainment screen, as well as the development of UI interaction, multi-screen linkage, voice control, vehicle networking, and cockpit domain

control systems. The downstream sector mainly consists of OEMs and new energy vehicle brands, including high-end gasoline vehicle and smart electric vehicle companies, applying triple-screen displays to smart cockpits, immersive entertainment, and ADAS information display scenarios to enhance vehicle technology, user interaction experience, and brand differentiation.

In 2025, global sales of automotive cockpit triple-screen displays are projected at 900,000 units, with a production capacity of approximately 1.2 million units, an average selling price of \$750 per unit, and an average gross margin of 20%-35%.

Triple-screen displays in automotive cockpits are a crucial component of high-end smart cockpits. Currently, the global market is primarily dominated by international Tier-1 automotive electronics companies, display panel manufacturers, and smart cockpit system integrators. European, American, Japanese, and Korean companies have deep technological expertise in high-end automotive OLED, curved screens, and digital cockpits. Chinese companies, on the other hand, are rapidly rising in popularity thanks to the new energy vehicle industry chain.

Demand for triple-screen displays in automotive cockpits mainly comes from high-end new energy vehicles, luxury brand models, and the smart cockpit upgrade market. As consumers increasingly demand immersive interaction, in-vehicle entertainment, and intelligent driving experiences, triple-screen displays are gradually penetrating from flagship models to mid-to-high-end models. New energy vehicle brands, in particular, emphasize cockpit technology and differentiated design, using triple-screen displays as a key selling point for intelligent features. Simultaneously, the rapid growth in demand for ADAS (Advanced Driver Assistance Systems), AI voice interaction, vehicle networking, and passenger entertainment is also driving up the penetration rate of passenger screens and multi-screen interconnection configurations. In the future, high-end pure electric platforms and software-defined vehicles will continue to be the main drivers of growth in the triple-screen market.

Automotive triple-screen technology is upgrading from traditional separate LCD solutions to 'ultra-wide, continuous, curved, flexible, and integrated' designs. Early products primarily employed a separate layout for the instrument panel, center console, and passenger entertainment screen. Newer generations are increasingly adopting OLED, Mini-LED, and flexible AMOLED displays, achieving ultra-narrow bezels, curved screens, and an integrated cockpit design. The technological roadmap also includes multi-screen interaction, dual-view display, privacy screen, AR-HUD fusion, and AI adaptive UI. In the future, with the widespread adoption of high-performance cockpit

chips and domain controllers, the triple-screen setup will be further integrated with voice interaction, gesture recognition, eye tracking, and the in-vehicle entertainment ecosystem.
