According to our (Global Info Research) latest study, the global Triplex Gas Boosters market size was valued at US\$ 275 million in 2024 and is forecast to a readjusted size of USD 412 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Triplex Gas Booster is a device that uses three sets of compression chambers to increase the gas pressure to the required level. It achieves gradual gas pressure increase through multiple compression stages (usually low pressure, medium pressure and high pressure), with higher compression efficiency and stability. The booster is suitable for occasions that require large flow and high pressure gas, such as oil, natural gas transportation, chemical production and gas storage industries. Its structural design makes the gas compression process smooth, can effectively reduce gas leakage and energy loss, and improve work efficiency.
