According to our (Global Info Research) latest study, the global Tris-NH₄Cl Red Blood Cell Lysis Buffer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Tris-NH₄Cl Red Blood Cell Lysis Buffer, also known as Tris-NH₄Cl Lysis Buffer, is a solution for lysing and removing anucleated red blood cells from tissue samples or blood in humans, mice or other mammals, and its main active ingredients are ammonium chloride. Tris- NH₄Cl Red Blood Cell Lysis Buffer has been optimized to lyse anucleated red blood cells without damaging lymphocytes or other cells with nuclei. For lysing and removing nucleated red blood cells, such as red blood cells of birds or poultry, the effect is not good, and it is not recommended to use when lysing similar cells. The lysate is sterilized by filtration, and the blood or tissue cell samples treated with Tris-NH₄Cl Lysis Buffer can be used for subsequent cell culture, cell fusion, nucleic acid or protein extraction, and various routine analysis and detection.
