## Abstracts

According to our (Global Info Research) latest study, the global Tris (trimethylsilyl) Phosphate market size was valued at US\$ 89.5 million in 2024 and is forecast to a readjusted size of USD 121 million by 2031 with a CAGR of 5.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Tris(trimethylsilyl) phosphate is an organosilicon phosphate compound with the chemical formula  $[(CH_3)_3Si]_3PO_4$ , which is formed by replacing the three hydroxyl groups (-OH) in the phosphoric acid molecule with trimethylsilyl groups (-Si(CH<sub>3</sub>)<sub>3</sub>). Its structural characteristics are that the silicon oxygen phosphorus skeleton is combined with the hydrophobic methyl group, which gives it high thermal stability, low surface energy, flame retardancy and hydrophobic properties. The compound is usually a colorless transparent liquid or a low melting point solid. It can decompose into silicon dioxide and phosphate at high temperature or inert atmosphere. It is widely used in surface modification, flame retardants and electronic material precursors.
