Abstracts

The global Tris(hydroxymethyl)aminomethane market size is expected to reach \$ 1782.6 million by 2029, rising at a market growth of 23.5% CAGR during the forecast period (2023-2029).

The global key manufacturers of Tris(hydroxymethyl)Aminomethane are Suzhou Yacoo Science, ANGUS Chemical, and Jiangsu Tianjiayi Chemical, which together hold a share of nearly 98%. Chemical is the largest global producer with about 75% share, followed by Suzhou Yacoo Science with about 20% share. North America is the largest global production region with about 50% share, followed by Europe and China with 25% and 20% respectively. In terms of product type, standard grade is the largest segment with about 72% share, while in terms of application, bio-buffer is the largest downstream segment with about 75% share.

Tris, or Tris(hydroxymethyl)aminomethane, or known during medical use as tromethamine or THAM, is an organic compound with the formula $(\text{HOCH}_2)_3\text{CNH}_2$. It is extensively used in biochemistry and molecular biology as a component of buffer solutions such as in TAE and TBE buffers, especially for solutions of nucleic acids. It contains a primary amine and thus undergoes the reactions associated with typical amines, e.g. condensations with aldehydes. Tris also complexes with metal ions in solution. In medicine, tromethamine is occasionally used as a drug, given in intensive care for its properties as a buffer for the treatment of severe metabolic acidosis in specific circumstances. Some medications are formulated as the 'tromethamine salt' including hemabate (carboprost as trometamol salt), and 'ketorolac trometamol'
