## Abstracts

The global Trochoid Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A trochoid pump is an internally inscribed positive displacement pump that transports fluid by meshing an external gear with an internal gear. It is called a trochoid pump because the tooth profile of the external and internal gears is shaped like a trochoid curve. A trochoid curve is a curve drawn by a fixed point inside or outside a circle when the circle is rolled without sliding along a certain curve.

When an internal gear is driven, the meshing external gear also rotates in the same direction. This makes them compact, and they have features such as low-gear sliding speed, low noise, and low-pressure pulsation. Although trochoidal pumps are most commonly used for pumping oil, they can also be used for coolants, fuels, and special liquids.

This report studies the global Trochoid Pump production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Trochoid Pump, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
