Troughing idlers are critical components in belt conveyor systems, consisting of three or five rollers arranged in a specific trough-shaped configuration to support and guide the conveyor belt into a trough profile for increased material loading capacity and spillage prevention. Manufactured with high-quality steel pipes and precision bearings, they feature high load-bearing capacity and wear resistance, with specially designed roller angles ensuring smooth belt operation and reduced deviation, making them ideal for heavy-duty material handling applications in mining, ports, and power plants while improving conveying efficiency and reducing maintenance costs.
