## Abstracts

According to our (Global Info Research) latest study, the global Truck-mounted Howitzer market size was valued at US\$ 362 million in 2024 and is forecast to a readjusted size of USD 454 million by 2031 with a CAGR of 3.3% during review period.

A truck-mounted howitzer is a type of artillery system that combines the mobility of a truck chassis with the firepower of a howitzer. The howitzer, which is a large-caliber cannon designed to fire projectiles in a high trajectory, is mounted onto a modified truck. This integration allows for rapid deployment and movement across various terrains, making it more agile compared to traditional towed howitzers. The truck provides the necessary means of transportation and can also serve as a stable platform for firing the howitzer. Modern truck-mounted howitzers are often equipped with advanced fire control systems, which enable accurate aiming and firing at long ranges. They can fire a variety of ammunition types, including high-explosive shells, smoke shells, and precision-guided munitions. These howitzers are highly versatile and can be used in a wide range of military operations, from providing direct fire support to troops on the ground to engaging enemy positions at a distance, and are an important asset in modern military forces due to their combination of mobility, firepower, and relatively low cost compared to self-propelled howitzers mounted on tracked vehicles.
