Abstracts

The global Trunk Media Gateway (TMG) market size is expected to reach \$ 180 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global sales of Trunk Media Gateway (TMG) reached approximately 300 k units, with an average market price of about USD 400 per unit, an annual production capacity of roughly 400 k units, and an industry-average gross margin of approximately 35%.

A Trunk Media Gateway (TMG) is a border device placed between carrier trunks (SIP trunk / PRI, etc.) and enterprise voice systems (IP-PBX, UC, contact center, recording, SBC, etc.). It enables protocol/signaling interworking (SIP/ISDN/SS7, etc.), media transcoding/codec adaptation, numbering & routing, interconnect and security controls, while safeguarding QoS and reliability (jitter buffering, echo handling, redundancy). Compared with generic gateways, it is optimized for carrier-trunk interconnect rules and network behaviors, reducing enterprise migration and cutover risk.

Upstream is dominated by SoC/CPU (x86/ARM), DSP/voice-processing ICs, Ethernet PHY/switch silicon, memory/power, chassis mechanics, plus software building blocks such as SIP stacks, media engines, transcoding libraries, OS/virtualization and security components, with ODM/EMS handling SMT and assembly. Midstream OEM/brands package hardware platforms + firmware + interop certification and deliver management/ops tools. Downstream consumption concentrates in enterprise SIP trunk termination, inter-network/private-network interconnect, contact-center concurrency expansion, smooth replacement of legacy PBX/ISDN, and carrier/SI project deployments—with repeat demand driven mainly by channel concurrency, site rollout,

redundancy, and scale-up upgrades.
