The global Trusted Data Space Solution market size is expected to reach \$ 1999 million by 2032, rising at a market growth of 15.5% CAGR during the forecast period (2026-2032).

Trusted Data Space Solution comprises a comprehensive suite of software, platforms, and operational services designed to support the construction of infrastructure for data circulation and utilization, as well as the establishment of trusted data spaces. Typically, such solutions consist of modules including data routers/connectors, identity authentication and trust management, access control, data asset mapping, privacy/confidential computing, blockchain-based data notarization, metadata catalogs, data product marketplaces, compliance auditing, and cross-border data flow governance. The core objective is to enable cross-entity, cross-industry, and cross-regional data exchange?characterized by the ability to 'supply effectively, circulate freely, utilize optimally, and ensure security'?while ensuring that data remains within its original domain or is shared only under controlled conditions. Demand for these solutions is primarily driven by initiatives such as China's Trusted Data Space construction, the EU's Data Act, Catena-X/Manufacturing-X, Japan's Ouranos Ecosystem, and the need for compliant circulation of AI training data. The market as a whole is currently transitioning from a policy-driven phase toward large-scale industry adoption, with typical comprehensive gross margins ranging from approximately 35% to 60%.
