According to our (Global Info Research) latest study, the global TSLP-Targeted Drugs market size was valued at US\$ 310 million in 2025 and is forecast to a readjusted size of US\$ 549 million by 2032 with a CAGR of 8.5% during review period.

In 2025, global Tslp-Targeted Drugs production reached approximately 86k doses, with an average global market price of around US\$3.5k per dose.

TSLP-targeted drugs are a class of innovative biologics designed to inhibit the signaling pathway of thymic stromal lymphopoietin (TSLP), a key upstream cytokine involved in initiating type 2 inflammatory responses. Secreted primarily by epithelial cells, TSLP plays a central role in diseases such as asthma, atopic dermatitis, and chronic rhinosinusitis. By targeting TSLP at the top of the inflammatory cascade, these drugs can broadly suppress immune activation and provide disease control across multiple allergic and inflammatory conditions. Most TSLP-targeted therapies are monoclonal antibodies, with representative products such as Tezepelumab, which has emerged as a key innovation in respiratory and immunology therapeutics.

The upstream of the TSLP-targeted drug industry includes biopharmaceutical raw materials and technology platforms such as cell culture media, recombinant protein expression systems (e.g., CHO cells), antibody engineering technologies, and single-use bioreactors, with key suppliers including Thermo Fisher Scientific, Cytiva, and Merck KGaA. The midstream consists of innovative biopharmaceutical companies responsible for antibody discovery, clinical development, and commercial manufacturing, with major players such as AstraZeneca and Amgen. Downstream applications are centered on hospitals, specialty clinics, and patient care systems. The

industry exhibits a typical structure characterized by technology-intensive upstream, R&D-driven midstream, and clinically driven downstream demand.
