Abstracts

According to our (Global Info Research) latest study, the global TSV Etching Equipment market size was valued at US\$ 1101 million in 2024 and is forecast to a readjusted size of USD 1959 million by 2031 with a CAGR of 8.7% during review period.

TSV etching equipment focuses on creating channels with a high depth-to-width ratio inside silicon wafers. Today, the mainstream etching method uses dry etching technology, specifically reactive ion etching (RIE) or deep reactive ion etching (DRIE). These technologies achieve precise and efficient high-aspect-ratio etching of silicon wafers by exciting the formation of plasma on the surface of the silicon wafer and cleverly combining the dual effects of ion physical bombardment and chemical reaction.
