Abstracts

The global TSV Etching Equipment market size is expected to reach \$ 487 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

TSV etching equipment focuses on creating channels with a high depth-to-width ratio inside silicon wafers. Today, the mainstream etching method uses dry etching technology, specifically reactive ion etching (RIE) or deep reactive ion etching (DRIE). These technologies achieve precise and efficient high-aspect-ratio etching of silicon wafers by exciting the formation of plasma on the surface of the silicon wafer and cleverly combining the dual effects of ion physical bombardment and chemical reaction.

In 2024, the global production of TSV etching equipment will be 150 chambers, with an average price of 1.7 million USD/chamber.

In the global semiconductor equipment market, through-silicon via (TSV) etching equipment, a key component of deep silicon etching, is gaining increasing attention.

Samco and AMEC have become key players in this market, leveraging their technological advantages and product innovations. Samco's TSV etching equipment includes the RIE-400iPB and RIE-800iPB models, with the representative RIE-800iPBC being specifically designed for MEMS and TSV production. AMEC, a leading Chinese semiconductor equipment manufacturer, offers the Primo TSV? series of equipment specifically designed for high-performance TSV etching applications. With the rapid development of 3D integrated circuits, 2.5D packaging, and MEMS devices, market demand for TSV etching equipment is expected to continue to grow.
