According to our (Global Info Research) latest study, the global TT&C Baseband Modem market size was valued at US\$ 539 million in 2023 and is forecast to a readjusted size of USD 738 million by 2030 with a CAGR of 4.6% during review period.

The TT&C baseband modem is a key terminal equipment used in satellite measurement and control communication systems. It integrates multiple functions such as distance measurement, speed measurement, remote control, telemetry, and data transmission. It is an important component for completing satellite tracking, telemetry, and remote control tasks. The equipment can handle measurement and control systems of different platforms, tasks, systems, and parameters, including satellite USB system and spread spectrum system measurement and control, baseband processing of digital transmission signals, as well as remote control command sending, telemetry data reception, channel simulation and other functions. Since the equipment has complex functions and contains sensitive information, it is inconvenient to operate and there is a risk of leakage during maintenance. Therefore, the localization of the equipment is of great significance to reducing costs, improving confidentiality and ease of operation.
