The global Tube and Shell Type Evaporator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Tube and Shell Type Evaporator is a type of evaporator that is commonly used with refrigeration systems and chillers. It consists of a pipe inside with a small tube arranged in a lot. The tubes sit inside the shell and contain the chilled water, while the shell holds the refrigerant. The refrigerant and water never meet or mix, they are always separated by the metal wall of the tube and only the heat transfers between these.
