According to our (Global Info Research) latest study, the global Tube Separator market size was valued at US\$ 1966 million in 2024 and is forecast to a readjusted size of USD 2822 million by 2031 with a CAGR of 5.3% during review period.

The tubular separator is a high-speed centrifugal separator with a tubular drum. It separates materials by specific gravity through the centrifugal force of high-speed rotation to achieve the purpose of purification. The drum of the tubular separator has a relatively small diameter and a long length, and the overall shape is tubular, which is the origin of its name. The drum is the leading part that rotates at a fixed speed and high speed. It is made of thicker stainless steel plates, and the internal surface is processed and polished with high precision to ensure its rotation stability and service life.
