Tubed type cold plates are a highly efficient heat dissipation solution commonly used in electronic devices and high performance computing. Its design consists of fluid channels embedded inside the cold plate, through which the coolant circulates and comes into direct contact with the heat-generating components. This construction enables excellent thermal transfer performance in a small space, ensuring that electronic components maintain a stable temperature under high loads. The embedded tube cold plate is suitable for applications with high thermal requirements, such as data centres, servers and power electronics, and can effectively improve the reliability and operational efficiency of the equipment.
