## Abstracts

The global Tuberculin market size is expected to reach \$ 455 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Tuberculin, also known as purified protein derivative is a combination of proteins that are used in the diagnosis of tuberculosis. This use is referred to as the tuberculin skin test and is recommended only for those at high risk. Injection is done into the skin. After 48 to 72 hours if there is more than a five to ten millimeter area of swelling the test is considered positive.

A tuberculin skin test (also called a Mantoux tuberculin test) is done to see if people have ever been exposed to tuberculosis (TB). The test is done by putting a small amount of TB protein (antigens) under the top layer of skin on the inner forearm.

Global Tuberculin key players include Sanofi Pasteur, Zoetis, Par Sterile, SSI, etc. Global top four manufacturers hold a share about 75%.

North America is the largest market, with a share over 50%, followed by Japan and Europe, both have a share over 35 percent.

In terms of product, PPD-S is the largest segment, with a share about 50%. And in terms of application, the largest application is Human Use, followed by Animal Use.

This report studies the global Tuberculin production, demand, key manufacturers, and key regions.
