Abstracts

Tuberculosis (TB) is an infectious disease, which is caused by *Mycobacterium tuberculosis*. These bacteria generally infect human lungs. However, it can infect other body parts/organs as well. Three major types of tuberculosis are found: latent, active, and drug-resistant tuberculosis. Symptoms are not identifiable in case of latent tuberculosis, due to presence of an inactive form of bacteria. In active tuberculosis, symptoms are clearly visible and they can spread from one person to another. Coughing for more than two weeks, chest pain, coughing up blood, chills, fatigue, unintentional weight loss, fever, and loss of appetite are some of the common symptoms of active tuberculosis. HIV/AIDS, severe kidney disease, cancer, diabetes, and malnutrition are some of the key risk factors generally found to be associated with tuberculosis.

SCOPE OF THE REPORT:

This report focuses on the Tuberculosis Drug in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Growing prevalence of multi-drug resistant tuberculosis is driving the tuberculosis drugs market. Drug shortages is a major restraint for the tuberculosis drugs market, especially in low- to medium-income countries of the world. Tuberculosis associated with diseases such as HIV/AIDS and conditions such as obesity is extremely difficult to manage. The tuberculosis drugs market can be segmented based on drug class, disease type, end-user, and region. In terms of drug class, the market can be categorized into first-line therapy, second-line therapy, and combination therapy. Isoniazid, Pyrazinamide, Rifampin, and Ethambutol majorly constitute the first-line therapy for TB; while

Streptomycin, Capreomycin, Ethionamide, Levofloxacin, and Gatifloxacin are generally considered as a part of the second-line therapy. Second-line therapy is expected to be a rapidly growing segment of the tuberculosis drugs market.
