Abstracts

According to our (Global Info Research) latest study, the global Tubular GEL Battery market size was valued at USD 1108.7 million in 2023 and is forecast to a readjusted size of USD 1451.5 million by 2030 with a CAGR of 3.9% during review period.

A Gel battery design is typically a modification of the standard lead-acid automotive or marine battery. A gelling agent is added to the electrolyte to reduce movement inside the battery case. Many gel batteries also use one-way valves in place of open vents, which help the normal internal gasses to recombine back into water in the battery, reducing gassing. Generally, gel batteries are less tolerant of high heat and are charged at lower power than traditional or AGM batteries.
