Tubular Level Indicators are simple and effective devices used to visually monitor the liquid level in tanks or vessels. They consist of a transparent tube, often made of glass or acrylic, mounted vertically along the side of the tank. As liquid fills or empties from the tank, it rises or falls within the tube, providing a clear visual representation of the liquid's level. These indicators are commonly used in low to medium pressure applications, offering an economical and straightforward solution for level measurement in industries such as water treatment, chemical processing, and oil and gas.
